Nat. Neurosci. 4:902-907(2001).
-!- FUNCTION: Inhibits alpha-1 adrenergic receptors.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom duct.
-!- TISSUE SPECIFONETRY: MW=2390.15; METHODE-Lectrospray.

These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The alpha-conotoxins can be used as neuromuscular blocking agents in surgery, and for treating disorders regulated at the neuronal nicotinic acetylcholine receptors, including cardiovascular disorders, gastric acetylcholine receptors, including cardiovascular disorders, gastric
               The present sequence represents a specifically claimed example of an alpha-conotoxin from the general formula given in AAY24155, which can used to treat disorders regulated at neuronal nicotinic acetylcholine

Disorders that can be treated include cardiovascular disorders, a gastric motility disorder, urinary incontinence, nicotine addiction, a mood disorder or small cell lung carcinoma. Mood disorders include bipolar disorder, unipolar depression, dysthymia and seasonal effective disorder. The alpha-conotoxins can also be used for diagnosis of small cell lung carcinoma. The alpha-conotoxin antagonists are able to disordininate between non-symmetrical ligand binding interfaces present on the nAchR. The alpha-conotoxin has the ability to potently block any receptor containing a alpha beta subunit interface, regardless of what other subunits may be present in the receptor complex.
                                                                                                                                                                                           (SALK )

The present invention describes derivatives (I) of alpha-conotoxin MII (II), an alpha-4/7 conotoxin peptide, with practically the same activias (II), (I), and its mimetics, are useful as cardiovascular agents; for treating or diagnosing small-cell lung carcinoma; and as gastric motility, urinary incontinence and anti-smoking agents. (I) and their

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ၁၁၁×s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                        depression, dysthymia and seasonal effective disorder. The alpha-
conotoxins can also be used for diagnosis of small cell lung carcinoma.
The alpha-conotoxin antagonists are able to discriminate between non-
symmetrical ligand binding interfaces present on the nAChR. The alpha-
conotoxin has the ability to potently block any receptor containing a
alpha beta subunit interface, regardless of what other subunits may be
                                                                                                                        disorders regulated at neuronal naChR, especially alpha 3 beta 2, alpha 3 beta 4 or alpha 7-containing naChR. Disorders that can be treated include cardiovascular disorders, a gastric motility disorder, urinary incontinence, nicotine addiction, a mood disorder or small cell lung carcinoma. Mood disorders include bipolar disorder, unipolar depression, dysthymia and seasonal effective disorder. The alpha-
                                                                                                                                                                                                                       The present sequence represents a specifically claimed example of an alpha-conotoxin, which can be used to treat disorders regulated at neuronal nicotinic acetylcholine receptors (nAChR). The alpha-conotoxins are useful for preparing a pharmaceutical composition for treating
                                                                                                                                                                                                                                                                                                                Claim 28; Page 6; 40pp; English.

                                                                                                      treated include cardiovascular disorders, a gastric motility disorder, urinary incontinence, nicotine addiction, a mood disorder or small cell lung carcinoma. Mood disorders include bipolar disorder, unipolar depression, dysthymia and seasonal effective disorder. The alphaconotoxins can also be used for diagnosis of small cell lung carcinoma. The alphaconotoxin antagonists are able to discriminate between nonsymmetrical ligand binding interfaces present on the nAChR. The alphaconotoxin has the ability to potently block any receptor containing a alpha beta subunit interface, regardless of what other subunits may be
                                                                                                                                                                                                                                                                                          The present sequence represents a specifically claimed example of an alpha-conotoxin, which can be used to treat disorders regulated at neuronal nicotinic acetylcholine receptors (nAChR). The alpha-conotoxins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes derivatives (I) of alpha-conotoxin MII (II), an alpha-4/7 conotoxin peptide, with practically the same activity as (II). (I), and its mimetics, are useful as cardiovascular agents; for treating or diagnosing small-cell lung carcinoma; and as gastric motility, urinary incontinence and anti-smoking agents. (I) and their mimetics can be designed to be selective for particular subtypes of neuronal nicotinic acetylcholine receptor, particularly the alpha 3 beta 2 and alpha 3 beta 4 subtypes. The present sequence represents a peptide from an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cartier GE,

Conopeptides are used to target neuronal nicotinic acetylcholine receptors (nAchrs) and selectively modulate the presynaptic release of specific neurotransmitters, for example in the treatment of tobacco addiction, cardiovascular and gastric mobility disorders, and urinary
        The present sequence represents an example of an alpha-conotoxin peptide from the general formula given in AAY24155, which can be

alpha-conotoxins can be used as neuromuscular blocking agents in surgery, and for treating disorders regulated at the neuronal nicotinic acetylcholine receptors, including cardiovascular disorders, gastric
                                               The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snail. These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The

                                                                                                                                                      The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snail. These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          motility disorders, urinary incontinence, nicotine addiction, mood disorders such as bipolar disorder, unipolar depression, dysthymia seasonal affective disorder, and small cell lung carcinoma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cone snail; alpha-conotoxin; venom; disulphide bond; mood disorder; neuronal nicotinic acetylcholine receptor; cardiovascular disorder; qastric motility disorder; urinary incontinence; nicotine addiction;
                                                                                                                                                                                                                                                 motility disorders, urinary incontinence, nicotine addiction, mood disorders such as bipolar disorder, unipolar depression, dysthymia and seasonal affective disorder, and small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                       nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The alpha-conotoxins can be used as neuromuscular blocking agents in surgery,
                                                                                                                                                                                                                                                                                                                                                         and are targeted at the neuronal nicotinic acetylcholine receptors of nervous system. They usually contain two disulphide bonds, which give
                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snail. These peptides are found in minute quantities in the venom of the snails.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Watkins M, Olivera BM,

                        neuronal nicotinic acetylcholine receptor; cardiovascular gastric motility disorder; urinary incontinence; nicotine small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    alpha-conotoxins can be used as neuromuscular blocking agents in surgery, and for treating disorders regulated at the neuronal nicotinic acetylcholine receptors, including cardiovascular disorders, gastric motility disorders, uninary incontinence, nicotine addiction, mood disorders such as bipolar disorder, unipolar depression, dysthymia and seasonal affective disorder, and small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snail. These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The
                                                             Cone snail; alpha-conotoxin; venom; disulph neuronal nicotinic acetylcholine receptor;
                                                                                                                              Cone snail alpha-conotoxin SEQ ID NO: 61.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a number of alpha-conotoxin peptides and their coding sequences from a number of different species of cone snail. These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined and the contain two disulphide bonds, which give

These peptides are found in minute quantities in the venom of the snails, and are targeted at the neuronal nicotinic acetylcholine receptors of the nervous system. They usually contain two disulphide bonds, which give them defined conformations, a rarity in molecules this small. The alpha-conotoxins can be used as neuromuscular blocking agents in surgery, and for treating disorders regulated at the neuronal nicotinic acetylcholine receptors, including cardiovascular disorders, gastric motility disorders, urinary incontinence, nicotine addiction, mood disorders such as bipolar disorder, unipolar depression, dysthymia and seasonal affective disorder, and small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      alpha-conotoxin polypeptides derived from the venom of cone snails useful e.g. as neuromuscular blocking agents for use in surgery and for treating unipolar depression -  \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seq
